

# Pinus halapensis

(Aleppo Pine)

## Notes

A tree well suited to the climate of South eastern Australia. The crown forms a dense covering of soft light green needles forming a dense rounded and sometimes flat-topped crown, often appearing swept to one side. Attractive pale grey bark with orange hints decorticates in small platelets; small cones to 7cm long are held in the crown for many seasons and do not create a litter problem.

<b>Origin</b>	Israel, Greece, Spain and Morocco
<b>Growth rate</b>	Moderate to slow
<b>Habit</b>	Rounded to domed
<b>Height</b>	15-30m x 10-15m
<b>Lifespan</b>	Long
<b>pH</b>	Complete range
<b>Compaction</b>	Not known
<b>Waterlogging</b>	Moderate
<b>Drought</b>	High
<b>Frost</b>	High
<b>Aerial salt</b>	High
<b>Pest &amp; disease susceptibility</b>	Generally trouble free.
