

SPECIES DESCRIPTION

Acacia stenophylla

(Eumong, River Cooba, Munumula, Balkura, Gurley, Gooralee)

Notes

Formative prune to develop good structure and can send up root suckers.

Above: Detail of foliage and flowers

Origin	Eastern Australia. Widespread in inland arid areas.
Habit	Moderate to fast growing. Small to medium evergreen tree with ascending branches and pendulous branchlets. Typical height: 5-10 metres. Typical width: 5-10 metres.
Description	Rough and fissured, dark grey-brown bark. Grey-green, long, leathery phyllodes (modified stems). Creamy-yellow ball flower heads in sparse clusters.
Tolerances	High water logging, salinity and frost tolerance. Moderate to high drought tolerance. High salt tolerance.
Site requirements:	Typically grows in alluvial heavy clay soils that are usually alkaline, often saline, near watercourses and around the margins of swamps and depressions, which are often waterlogged and sometimes inundated. Annual rainfall: 125-600 mm.
